What is a Consultant?

Consultants are the world's problem solvers. By definition, a consultant provides 'expert and professional advice' and in your career as a Consultant you'll be doing exactly that. You'll research, design, create, manage, test, innovate and analyse. After years of studying at university, commencing your career as a Consultant will see you developing your skills and drawing on your technical knowledge, from day one on the job. What's more, you'll be surrounded by talented and like-minded individuals. Together you'll be working with a diverse range of public and private sector clients, providing quality, innovative solutions for complex problems.
